

Medium to Heavy Engineering Specialists

<http://www.prodin.co.za/default.asp>

With vast experience gained over many years as a General Fabricator for a wide variety of projects of a Medium to Heavy Engineering nature, Prodin delivers exceptional and consistently high quality projects - on time and within budget. The company's Client Portfolio and the reputation of its management team are wholly behind the company's successful Track Record.

In and around the early 1990's, in addition to building a reputation as a General Fabricator, Prodin became a preferred supplier and manufacturer to the furnace industry. Although we now provide services and manufactured equipment to a much wider range of market sectors and clients, we continue to be respected as a specialist Furnace Component Manufacturer, in our industry.

The Furnace Industry, with its stringent quality requirements and exacting standards, has provided Prodin with a platform from which we now provide these high standards of quality to all our other clients and customers. Clients who require their design to be translated into a product that meets specification and is within the required tolerances, manufactured to a tight schedule, ensuring that all manufactured components will fulfil the operational requirements for which they were designed.

The Prodin name has become synonymous with an uncompromising commitment to Quality and as a leading South African Medium to Heavy Engineering Company, we provide services to the following industries and Sectors:

- Furnace Industry
