Prodin™ has recently been awarded various contracts for the manufacture and installation of OEM equipment for the mining sector.

Transformation is typical within South Africa's mining industry which demands the development of new and ever more cost-effective mining equipment. Having repeatedly delivered equipment to meet these requirements, Prodin™ is a preferred manufacturer for a number of specialised mining equipment suppliers.

Prodin™ provides equipment and services to a range of sectors according to stringent quality requirements and with exacting standards by adopting a total solutions approach. Customer intellectual property and designs are always protected as we aim to develop long-term relationships that guarantee delivery within budget.

Our facilities support the manufacture and trial assembly of large semi-mobile plants prior to dispatch to remote areas, thus eliminating any design or fabrication faults that might occur. This approach enables considerable cost savings by permitting necessary alterations and enhancements to be made onsite before equipment or structures leave our works.

- Hoppers
- Feed Bins
- Kilns & Convertors
- Chutes
- Silos
- Dragline Components
- Smelting and Roasting Equipment
- Continuous Miner for Coal Mining
- Heavy Steel Structures
- Heavy Ducting
